

# SAFETY PRODUCTS & SOLUTIONS

# HOW SAFE IS YOUR FACILITY?

# Are your machines guarded to all relevant standards?

# SERVICES

## Installation and Integration

Whether you need machine guarding installed on your manufacturing floor, a control panel upgraded with the appropriate safety and automation controls, installation of a pneumatic dump valve or safety IO, or a full machine safety upgrade, look no further than Proax Technologies. We, along with local integration partners, have the ability to create a full safety design, deliver a comprehensive BOM of products, and complete the install and commissioning.

## Pedestrian Traffic Mapping and Design

Designing warehouse or manufacturing site traffic flow may not be your specialty -so we are here to help. The safety team at Proax Technologies can assist you in understanding traffic priorities, planning strategic pathways for pedestrians and lift truck traffic, and choosing active and passive safety devices to enhance overall safety in your facility.

## Safety Training

Proax Technologies has a number of safety training courses available in person and online including product overviews, topical options, and career development safety certifications. Safety courses can be customized for large or small groups.

## Risk Assessments, Gap Assessments, and PSHSRs

Proax Technologies offers a range of safety assessments and reviews across Canada. These include new or modified machinery, robotic or cobot applications, and Prestart Health Safety Reviews (safety partner). Proax Technologies offers written reports of any deficiencies and once mitigated according to the relevant standards, we will provide a final sign off.

## Machinery Safety Layout and Design

The engineering and safety team at Proax Technologies has the capability of designing the mechanical, pneumatic, and electrical aspects of a safety design. Using input from your operators, engineers, maintenance and management, the team at Proax will help you achieve safety requirements while at the same time considering monetary and productivity requirements.
